

## Preferred Supplier

Water Features by Design is a WALGA preferred supplier for the design, supply and installation of water parks and playgrounds for Local Governments throughout WA.

WALGA operates a number of preferred supplier arrangements which conform with the requirements of the Local Government Regulations and negate the need to call for tenders when considering the installation of a water park.

This means that Councils are free to approach Water Features by Design directly for a quote without incurring the costs, workload and delays associated with the tender process. WALGA has done all the hard work in ensuring that WFBD meets the various contractual requirements, which means that Local Governments can feel confident in employing WFBD to design and build an interactive water park.

Call today for an obligation-free quote or to discuss your needs.

# Recent Experience

**The excitement of sprinkling water, random jets, overhead showers and hours of splashing turn a routine play date into a magical aquatic adventure.**

In late 2008, Water Features by Design successfully tendered to design, manufacture and install an interactive Water Fun park in Cue, Western Australia.

The Shire of Cue required a fun, safe, interactive environment where local children could cool off in the sweltering summer months. The facility also needed to be low maintenance and compliant with relevant Health Department regulations.

In just two trips, each five days long, with a six week break over the Christmas period for the concrete to cure, this award-winning park was completed on budget and weeks ahead of the client's deadline.

The parts and components were all custom-designed to suit the client's specification including a spraying daisy, overhead shower, ground spouts, water canons, spraying palms and arches.

Following the success of Cue and a number of metropolitan projects, WFBD was awarded two contracts via tender to design and construct water playgrounds for the shires of Yalgoo and Ashburton (in Onslow).

The Yalgoo playground consists of a themed play space which incorporates the

local children's artwork and elements of local flora in its design along with tipping buckets, water cannons, spray arches and various ground spouts. Light towers and shade sails make the park suitable for night and day-time use.

Onslow's theme is based on local flora, fauna and industry with custom-designed features including the iconic Ashburton Pea along with a windmill and 3m long Spanish mackerel. The park also includes water cannons, ground spouts and an innovative 1200mm wide tipping loader bucket. Shade sails, lights, fencing and artwork by the local children help set-off the original, custom design.

We have also just completed a water park at Cable Beach Club, Broome.

Each playground includes a number of standard features such as push button activation, automatic chlorine and UV water treatment, no standing water, concrete flooring with high slip resistance, random sequenced features, and interchangeable and replaceable pole feature components.

"Children of all ages can't resist the colour and movement of a custom-designed, interactive water park."

## Company Profile

**Water Features By Design is a trusted local name in the design, construction and installation of custom-built interactive water playgrounds.**

Since our inception seven years ago, WFBD has grown into one of the leading water feature specialists in Western Australia, with more than 2000 commercial and residential projects to our name.

We are a recognised leader in the field with a reputation for excellence and commitment to client satisfaction.

Given their safe and customised design, these water parks are suitable for installation at many locations including:

- public open spaces - parks, ovals, city squares etc
- residential developments
- school yard and council playgrounds
- indoor and outdoor leisure and aquatic centres
- childcare facilities
- sporting grounds
- children's medical facilities - ie hospices, health centres, hospitals

All of our water playground components are designed and manufactured locally here in WA which helps keep costs down and provide more flexibility. Each water play area is custom designed with a number of standard features including:

- no standing water
- completely random sequencing for all water features via pumps and solenoids

- fully recycled and automatically treated water
- exposed aggregate concrete or rubber-based flooring
- unlimited choice of colour schemes, play area themes and layout design
- touch pad activation
- option of interchangeable play area components
- Health Department of WA approval

The design possibilities are endless and we pride ourselves on being able to offer a truly unique and purpose-built application for each client be it locally, interstate or abroad.

We personally oversee each project from the design phase through to completion with after-sales training in water playground management and maintenance as part of the service.

As a WALGA preferred provider, WA Councils have the option of going direct without the need to tender.
